

ACTIVITY 16.1**Role Cards****Household Role Card**

You have 12 units of productive resources, but you get satisfaction only from consuming units of a good called Eonos. Your success will be determined by the number of Eonos you have at the end of the simulation. To acquire Eonos, you must sell your resources in the Resource Markets to Businesses to earn as much money as you can. Use this money to buy Eonos from Businesses in the Econo Market. You are free to negotiate whatever prices you can with any Businesses, but you may make exchanges *only* with Businesses, not other Households. At the end of the simulation, only the amount of Eonos you have matters—neither resources nor money can satisfy your wants.

Business Role Card

You have \$20, but you want to earn more money and maximize profits. Your success will be determined by how much more than \$20 you have at the end of the simulation. You earn money by producing and selling Eonos. To do this, you must first buy the necessary productive resources to produce Eonos in the Resource Markets from Households. To produce one Econo, you must have one human resource, one capital resource, and one natural resource, so the more sets of resources you are able to buy, the more Eonos you will be able to produce and sell. A set (or sets) of resources can be converted into Eonos at the Econo Factory. Then take your Eonos to the Econo Market and sell them to Households. You are free to negotiate whatever prices you can with any Households you want, but you may make exchanges *only* with Households, not other Businesses. At the end of the simulation, only the amount of money you have matters—neither unused resources nor unsold Eonos are of value to you.
